

La ASN cierra temporalmente la central nuclear de

Tricastin *(Actualización)

Fuente: WNN

French utility EDF said work to reinforce a dyke near the Tricastin nuclear power plant has now been completed and the estimated restart date of the plant's four reactors is 27 November. France's nuclear safety regulator requested EDF temporarily shut down the units while work was carried out as it claimed the embankment may not have been able to withstand a severe earthquake. As a result of the reactors being taken offline, EDF has revised its nuclear output target for 2017 from the previous 385-392 TWh to 383-387 TWh.
